

Debian-User: my treo won't sync

my treo won't sync

To: debian-user@lists.debian.org

i've tried both pilot-xfer (from pilot-link) and kpilot. neither recongizes it. my visor platinum works fine. there is the minor problem of the usb char dev not showing up til you hit the button. if i run pilot-xfer right after hitting the sync button, it works for the visor. treo just isn't seen.

does anyone have any tips? this is a treo 90.
