Hello. I'm running a current version of sid. My gtk applications all (for the most part) emit the same warnings:
Gdk-WARNING **: The X server advertises that RENDER support is present, but fails to supply the necessary pixmap support. In other words, it is buggy.

I've tried commenting/uncommenting the Load Xrender line out of XF86Config-4 with not changes.

The X version is 4.3 running in dual head xinerama mode, vid card is a Matrox MGA G400. Has anyone else had this problem?
