Hi,

---

`dpkg --pending -configure`

Setting up alsa-base (0.9.6-3)

Wrote ALSA configuration to /etc/alsa/modutils/0.9

In: creating symbolic link to '/etc/modprobe.d/alsa' to

'/etc/alsa/modutils/0.9': No such file or directory

dpkg: error processing alsa-base (--configure)

---

On inspection, 'modprobe' does not exist.

How do I fix this ?

Adam Bogacki,
