Hi, i dont have much experience with linux, neither in Debian.

I have 3 windoze box attached to a switch.

A Debian box (two network cards attached to that switch too) with dhcp3 giving dinamic ip to the PCs. (the 3 windoze boxes)

The 3 windoze should access internet trough the Debian.

The problem is that if i put an adress in the PCs internet explorer, the browser never reaches the site. (ex www.debian.org)

But, if i put an IP adress, the browser works fine and reach the site.(ex 192.25.206.10)

What should i configure in the debian that can make the windoze pcs to access internet?

Thanks a lot!

Adrian
