Hi all,

It seems xfce4 package in unstable is broken. I get the following message when I try to apt-get it.

```
root@vortex:~# apt-get install xfce4
Reading Package Lists... Done
Building Dependency Tree... Done
Some packages could not be installed. This may mean that you have
requested an impossible situation or if you are using the unstable
distribution that some required packages have not yet been created
or been moved out of Incoming.
```

Since you only requested a single operation it is extremely likely that the package is simply not installable and a bug report against that package should be filed.

The following information may help to resolve the situation:

The following packages have unmet dependencies:

```
xfce4: Depends: xfce4-mcs-plugins (>= 4.0.0+cvs.20030421-1) but it is not
going to be installed
E: Broken packages
```

and if I try to install xfce4-mcs-plugins, I get the following broken package error

```
root@vortex:~# apt-get install xfce4-mcs-plugins
Reading Package Lists... Done
Building Dependency Tree... Done
Some packages could not be installed. This may mean that you have
requested an impossible situation or if you are using the unstable
distribution that some required packages have not yet been created
or been moved out of Incoming.
```

Debian-User: xfce4 install problems in unstable

Since you only requested a single operation it is extremely likely that the package is simply not installable and a bug report against that package should be filed.

The following information may help to resolve the situation:

The following packages have unmet dependencies:

xfce4-mcs-plugins: Depends: xfce4-mcs-manager (>= 4.0.0+cvs.20030421-1.1) but 4.0.0+cvs.20030421-1 is to be installed

E: Broken packages

I would really appreciate any help in resolving this problem.

Thanks in advance,

Amal C. Phadke, Ph.D.
