Hi,

I have a strange problem with apt-get. I installed a package manually with dpkg after apt-get ran into a conflict and since then apt-get does not upgrade anything. It gives:

Reading Package Lists... Done

Building Dependency Tree... Done

Calculating Upgrade... Done

0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded

for upgrade, dist-upgrade and dselect-upgrade as well. I did run apt-get update it seems to get the new package lists but no effect when trying to upgrade. I use the unstable distribution. Could anyone help? I'm pretty much a newbie.

Thanks!
