chkrootkit reported possible LKM Trojan. 4 processes hidden for ps command.

Before reformatting the hard drive and reinstalling Debian, started a dvd backup using growisofs.

The backup of /usr was successful, backup of /var failed with duplicate names in /rr\_moved.

Obviously I would like to delete /rr\_moved but it is hidden from me. Is there any way to do this?

In the mean time I am continuing the backup on the assumption that I might retrieve specific files without reformatting the system.

The backup of /home was successful with the warning "missing whole name for 'rr\_moved'"

Tom
