

Strange idesk-problem

I have this strange problem where idesk crashes if I try to drag an icon. It starts ok, I can click the icons --- but if I try to drag them, it crashes.

When started from shell it says:

```
"Can't load: /usr/local/share/idesk/icons/gaim.png bailing --- Gaim
Check to see if the image and path to image is valid"
```

... for each image/icon.

When I drag an icon I get a lot of

```
"IMLIB ERROR: Cannot allocate RAM for XImage data
IMLIB ERROR: SHM can't get SHM Identifier for Shared Pixmap Wrapper
      Falling back on Shared XImages"
```

and lastly

```
"Segmentation fault"
```

Is this a imlib problem, or a idesk problem, or might there be some problem with the images? Other software shows them fine, no problems...

Idesk **has** worked. It's only now, after about a month of usage, that this problem has appeared ...

Any ideas/solutions?

h: Kristian
