To: Debian User List <debian-user@lists.debian.org>

What is the secret to make mozilla-thunderbird 0.4 check for new mail on startup in a unix movemail account?

Sadly, the obvious answer of checking the "Check for new messages at startup" checkbox in the account server settings does not make any difference.

The only way to get new mail is to click on the "Get Mail" icon once the thunderbird is loaded.

It wont even obey the "Check for new messages every x minutes" option.

cheers

dc
