To: debian-user@lists.debian.org

I have Tiger Audit set up on my Sarge system. My last two reports say this:

```
# Running chkrootkit (/usr/sbin/chkrootkit) to perform further checks...
```

```
OLD: --WARN-- [rootkit004f] Chkrootkit has detected a possible rootkit installation
```

```
OLD: Warning: Possible Slapper Worm installed
```

However, when I run chkrootkit itself, it says:

```
Checking `slapper'... not infected
```

So, is this a bug in Tiger? It isn't listed at [bugs.debian.org](http://bugs.debian.org).
