I believe all the startup scripts are in /etc/init.d

Instead of removing them try just removing the execute attribute from the file.

```
chmod -x <filename>
```

See how that goes.

Subject: startup options

what file controls what programs are started up at boot time. I installed some stuff, but now don't want them starting up every time it boots. I would like to remove them for the time being but be able to add them again later if I want them.
