To: debian-user@lists.debian.org

I installed apt-listchanges. And now see during an apt-get or in synaptic that the changelogs are being read. But I don't see see the changelogs.

From the man pages I know that I have to change /etc/apt/listchanges.conf and I mucked around a bit but still do not see anything

Can anybody advice me on how to setup apt-listchanges?

Jaap
