To: debian <debian-user@lists.debian.org>

While on vacation, one of our servers more or less died when /var filled up. This was a result of the error.log file for apache2 filling up with the following messages.

[Sun Aug 22 06:25:32 2004] [notice] child pid 3881 exit signal Segmentation fault (11)

[Sun Aug 22 06:25:32 2004] [notice] child pid 3880 exit signal Segmentation fault (11)

[Sun Aug 22 06:25:33 2004] [notice] child pid 3894 exit signal Segmentation fault (11)

I fixed it over the phone, but when I returned I found that two other computers had the same huge log files. Fortunately they had larger /var partitions, so it didn't cause any real problems. All of the computers in question are runnin Debian/Sarge. Can anyone suggest a reason for this?

What difference does it make to the dead, the orphans,
and the homeless, whether the mad destruction is brought
under the name of totalitarianism or the holy name of
liberty and democracy?
