Hi gays,

I'm gonna migrate to Linux and would like to install Debian on my comp. I have already downloaded iso images and burnt them on CDs; problem is that when I insert the CD and restart it doesn't boot Debian (in setup menu primary boot device is CD-ROM and when I insert Windows XP installation disk it does).

could you help me, please, to figure out whats the problem and how to fix it.

Sincerely,

Lado.
