Hello,

first I am sorry to have sent 2 idiot messages on the list, it was an error on my part.

I have a problem with mozilla-browser 1.7.3-5 :
certain site (<http://www.franceinter.com>) asks me to install the plugin "flash".

I downloaded the tarball "install_flash_player_7_linux.tar.gz".

My question is: can I compile this file (in /usr/local/) and installed it without causing any damage to my system ?

Thanks for any advice.
