Hi,

Yesterday I tried to upgrade KDE from 3.2 to 3.3.1. This is how I tried to do

```
$ apt-get install kdebase
```

```
$ apt-get install kde
```

After the installation, I tried to log into KDE.

After logging in I found that no applications are listed in the K-Menu.

That is, when I click on the "K" button, there is nothing between "All Applications" and "Actions".

Nothing happens when I right click the desktop and choose - 'Configure Desktop' or when I right click the panel and choose 'Configure Panel'.

I think, I have completely messed up my KDE. I can log in to GNOME but still I want to sort out this issue as well.

I request your suggestions.
