

Confusion on log rotating

Source: <http://linux.derkeiler.com/Mailing-Lists/Debian/2005-01/4278.html>

To: Debian Linux Distro Users Discussion <debian-user@lists.debian.org>

I would like most if not all of my logs to contain just the current day data and then archive them compressed for 7 days back.

To give an example:

syslog = today

syslog.0 = yesterday

....

syslog.6 = a week ago

and then erase the older than .6

I must confess that the logrotate stuff got me totally lost :(

Any help please ?

Bob
