Hi

I thought to let you know:

Since the build manager (?) of Openofficeorg now also build debian packages, the .deb packages of the latest unstable release of Openofficeorg 2.0 are available at

<ftp://ftp.linux.cz/pub/localization/OpenOffice.org/devel/680/>

I had to install the packages with
`dpkg -i --force-overwrite *.deb`

They work great, only the menu fonts are very big :-(

News on Openofficeorg snapshots can be found at:

<http://blog.janik.cz/>

John
