Hi Folks,

Has anybody else seen this problem [i386, sid, gnome]:

When I try to send a document from oowriter as a pdf attachment, it does not work if thunderbird is already open. (A compose window appears, but the document is not attached).

If I first close Thunderbird, it works properly. The PDF is correctly created by oowriter, as I can then attach it manually from /tmp.

Anybody seen this?

Is it likely a problem with oo.org or thunderbird?

cheers

dc
