To: Debian User List <debian-user@lists.debian.org>

I'm using Jack to rip and encode audio CDs, but am finding that Jack is ignoring the VBR settings in ~/.jackrc:

```
bitrate:128
vbr:yes
vbr_quality:4.0
encoder:lame
```

Taking the bitrate setting out doesn't seem to help; Jack just goes back to its default of 160 bits. How can I get Jack to use VBR encoding?
