

Debian-User: No .jigdo files

No .jigdo files

Hi:

For the last two weeks or so, the debian-unofficial site at ftp.fsn.hu gives only the .iso files. There is a jigdo folder, but no .jigdo files there. Is there any reason for this change? Are we now supposed to use jigdo-lite to download the .iso file, or is there some temporary problem?

Thanks for any information.
