

Debian-User: MySQL setup cloning?

MySQL setup cloning?

To: debian-user@lists.debian.org

Is there some simple way to duplicate a MySQL setup from one server to another, with all tables, queries, and accounts/passwords? Perhaps just copying certain files?

I'm not a MySQL expert (obviously), just trying to have a warm backup server ready if the main one goes down. I don't need two-way replication at all, just the ability to manually copy everything over once a day or so.

Thanks.
