Hi list

I have an apache server that is behind a natted fw.

My apache was working, but now for some funny reason if keep supplying the webbrowser the private ip.

the dns is fine because all resolves etc, but in the web browser it says fetching 192.168.111.11

I looked in the host file.

If anyone has any tips or advice, it would be most appreciated.

Kind Regards

Brent Clark
