Hi,

I'm trying to install a debian system (3.1) on a Asus K8N motherboard (nVidia SATA).

My sata drive can't be seen from the system:

What I get is:

```
ata1 is slow to respond, please be patient
```

```
ata1 failed to respond (30 secs)
```

I tried with knoppix, it didn't work either. There are some drivers to use (http://www.nvidia.com/object/linux_nforce_1.0-0283.html), but I can I use them if I don't install the system???
