Hi folks!

I have a new Samsung TS-H552 DVD-RW with a maxium writing speed of 4x. I tried to record some DVD's but in all K3b ignore my selection of writing with 4x speed. This only don't occur when I select 1x speed, but in all the other cases as writing in "Auto", "2x" or "4x" ignore my selection.

I don't know that I can do for resolve my problem, i tried to find some help with Google without obtain any result. Thanks for all!

Greetings,
Carlos Mantero.
