To: Debian User <debian-user@lists.debian.org>

I am trying to see if I can get this Brother HL–2070N printer to work with my Debian Sid work station.

I have connected the printer to the switch of my home network (192.168.xyz). The printer got an IP address from my DHCP server (running on a Debian stable).

I started using the foomatic–gui program to configure it through a web browser. But there is no option for Brother printer's driver, so I'm stuck at that step. How do I go about installing the driver or configuring it so that I can test it if it even works with Debian or not.

Thanks for the help.
