Hi there

I tried to install OpenAFS on Debian Sarge 3.1.

To do this I used the afs-newcell script as described in the documentation (I have already a working Kerberos V setup, afs principal is included). Unfortunately, the afs-newcell script returns an error where it complains that it cannot find a '<default>' cell in the database. I'm new to AFS but it seems to me that this cell is not registered somewhere in the database and after reading a bit in the IBM AFS manual should also not be needed.

Has anyone of you an idea what is going on here or what I'm doing wrong?

cu

Eugen
