Hi,

I installed multi-gnome-terminal in sid, but when I start it up, the characters in the terminal are not standard ascii characters; they are unusual characters, some with accents, and some are simply boxes. Furthermore, there is no blank space in the terminal window, but it is filled with these characters. I did a search and read through some of the manual, but don't know what might be causing this. Any suggestions on how to get it working? Thanks,

Ric
