```
you can use tcpdump to see if (and who) you are querying for your name
resolutions:
```

```
# tcpdump -tqn dst port 53
```

I'm trying to learn a bit here and although name res is working on my box have done an apt-get install tcpdump but when trying this get:

```
UNCLELEO:/home/marty# tcpdump -tqn dst port 53
tcpdump: getifaddrs: Connection refused
UNCLELEO:/home/marty# tcpdump -tqn dst port 80
tcpdump: getifaddrs: Connection refused
UNCLELEO:/home/marty#
```

Not sure if this might've been caused by a problem noted during the install process:

```
UNCLELEO:/home/marty# find / -name tcpdump
UNCLELEO:/home/marty# apt-get install tcpdump

Re: Problem Resolving names into ip addresses

Packages

(/var/lib/apt/lists/ftp.nerim.net_debian-marillat_dists_woody_main_binary-i386_1

- stat (2 No such file or directory)

Selecting previously deselected package libpcap0.8.

(Reading database ... 15572 files and directories currently installed.)

Unpacking libpcap0.8 (from ../libpcap0.8_0.8.3-5_i386.deb) ...

Selecting previously deselected package tcpdump.

Unpacking tcpdump (from ../tcpdump_3.8.3-5sarge1_i386.deb) ...

Setting up libpcap0.8 (0.8.3-5) ...

Setting up tcpdump (3.8.3-5sarge1) ...

W: Couldn't stat source package list_ftp://ftp.nerim.net woody/main

Packages

(/var/lib/apt/lists/ftp.nerim.net_debian-marillat_dists_woody_main_binary-i386_1

- stat (2 No such file or directory)

W: You may want to run apt-get update to correct these problems

UNCLELEO:/home/marty# which tcpdump

/usr/sbin/tcpdump
