Thanks for the info, as you can see I'm pretty clueless about this kind of thing. I take it the "m-a a-i" bit is something to do with this module-assistant package...?

Yeah, m-a a-i = module-assistant auto-install or something like that.

Do I need to install the NVidia drivers after doing all of the above...?

That's what m-a does. You just have to reconfigure X, which is what the dpkg-reconfigure is for.

Smashing, thanks for your help.
