I am using a Dell raid controller on a PE1850 that has a create interface for changing things AND it will tell you if what you are about to do is going to destory data.
Oh yes, running Debian 2.4.x

Is "RAID Reconfiguration Tool" (<http://unthought.net/raidreconf/>) still the only way to reconfigure an array? I just thought since the page is from 2001 maybe there is a new way? I would like to add another 200GB disk and go from RAID-1 -> RAID-5
