Other than that, you can install a WM: wmaker, openbox,
kde,gnome,....
And an display manager: wdm, xdm, gdm, kdm...
Cheers,
Kev

Just a minor nitpick.

kde is the desktop environment. kwin is the window manager of kde.

raju

Hi Raju (I guess that is a nickname?),

Yes. That is what most of my friends call me.

As someone who has not touched Kde in a while, ;-), it was an oversight. For that matter, I should have said metacity, not gnome.

Re: No xterm window by default?

Re: No xterm window by default?

It is just a common confusion that folks have with:

gnome vs. metacity

kde vs. kwin

linux vs gnu/linux

I normally do not bother about these minor issues. But the OP seemed to be a newbie, so I thought I would point it out right in the beginning.
