

cvs for media files?

Source: <http://linux.derkeiler.com/Mailing-Lists/Debian/2006-02/msg03267.html>

Hi folks,

I'm going to be working on a collaborative audio documentary, probably using audacity. I would love to do some kind of version control on the project, so we could all work on the documentary at home & then merge (and accept/reeject) our changes somehow. But probably this will involve incremental changes to a significant number of media files. Does anyone know whether there's a version-control system which can handle such changes to binary files easily and clearly? I don't know much about cvs & its competitors, so this is just an out-of-the-blue question.

thanks,

matt
