Printing from  
OpenOffice.org is fine, but  
whenever I try to print from  
Firefox, the output comes  
out in Landscape with the  
top part of the text chopped  
off. The Print Preview looks  
fine.

Printing to file a .ps and then using gv to  
look at that output is wrong also?

It looks fine via .ps and gv. (Good diagnostic; thanks. I'm  
still not sure where to go from here, but this was good info.)

Well anyway you will be able to print via gv.

Ah. I didn't actually try printing from gv; I just looked at it on-screen. Now that you've  
mentioned it, I tried printing, and it came out landscape.

I just found ~/.lpoptions in my home directory, and in it was a section that said "orientation-requested=4"; I  
changed this to 1, and now I'm getting portrait printouts instead of landscape. Woot! (Of course, I haven't tried  
printing from OO.o, etc, so I may have hosed up something else.)

I don't know how this file was generated, or what 1 or 4 means, or where this file got the idea I wanted this  
setting to be 4, but I believe I'm getting closer to solving my issue.

Re: Firefox always prints landscape

The printout seems a little low on the page, but I think I'll worry about that another day.

Thanks!
