Hi,

Piyush Garyali wrote:

How in the world do I get colors to display in xterm? when I do "ls --color" all I get is mono with bold.

Long shot, but to what is TERM set? I could not get colors in emacs (in a terminal) with TERM=vt100, but I can with TERM=linux and others. You can also try TERM=xterm-color.

HTH,

Luis
