Greetings:

I'm attempting to disable 'keyboard interactive' access prompt on my sshd server. So far I've been unsuccessful.

I can log in using my remote pub key, but can also login with 'keyboard interactive' prompt.

How can I disable this ? I've set 'PasswordAuthentication no' in /etc/ssh/sshd_config. I've also set both RSAAuthentication, and PubkeyAuthentication to yes.

here is what my sshd.config file says:

```
# Change to yes to enable tunnelled clear text passwords
PasswordAuthentication no
```

so that option does not do what you think.

what i think you want is:

```
ChallengeResponseAuthentication no
```

also, did you restart sshd?
