Hi,

I'am trying to bring my soundcard to work under sarge with the kernel 2.6.16 compiled without module support so I can't use alsa.

This is the pci output of my card:

\*\*\*

```
lspci|grep Multi
0000:00:04.5 Multimedia audio controller: VIA Technologies, Inc.
VT82C686 AC97 Audio Controller (rev 20)
```

\*\*\*

With make menuconfig I use to compile a PCI card under device drivers:

VIA 82C686A/B, 8233/8235 AC97 Controller

Is this the wrong driver as I can't hear sound with xmms or xine ?

--

Best Regards,

Mark
