Hi all,

I recently upgraded to sarge, and now my samba passwords expire every couple of weeks (i think). I also think it's using this new password database. How do I turn off password expiration?

Thanks!

I seem to be having the same problem, my samba passwords all keep expiring. I noticed that there was no resolution on the list archives, so I thought I'd ask again.

thanks,  
Brian Minton

Hi,

I don't know for sure if this might help, but I have written something down about this. Unfortunately, I don't have access to the computer containing the document until monday evening. I'll look it up ASAP and let you guys know.

From what I remember, I looked up the command and it was "pdbedit". It seems to set some samba options, but I don't know the exact options.

Hope this will help, but I'll post the info in my document monday anyway.
