Hi folks,

I'm contemplating a dual-monitor setup consisting of a 1280x1024 LCD and a 1024x768 LCD. There's a couple of sources of oddity here: the difference in resolution and the different display technologies.

Has anyone tried a setup like this? Is it OK, or too weird to use?

Thanks,

Reid

Why would that be weird? Of course, you won't have two identical screens or a symmetric setup, but that works just fine. I am talking about two separate screens in the config, not xinerama or other stuff. That's how I use it and how I like it.

Good luck!
