I have a Bonzai Debian ISO CD that boots in serial ata,

But I don?t know where to upload it so that you can try it.

If you happen to be using KDE it has a nifty little public file server applet you can dock into the taskbar. Then your friend (or anyone, so be carefull) can get any files you put in the public_html directory by going to <http://your.ip.address:8001>. That's all configurable.

Nifty little app.
