I turn off the mixing per software (ESD) in Desktop>Preferences>Sound and the sound is working normal now. Can i use the ESD and dont break the soundsys??

Thanks

Assunto: erro with Sound (deb unstable)
Para: debian-user@xxxxxxxxxxxxxxxx

Every time the system boot up the sound just works for gnome error sounds and for the xmms per exemple dont works and show that error:

** WARNING **: alsa_setup(): Failed to open pcm device (hw:0,0): Dispositivo ou recurso está ocupado.
(Translation: Device or resorce is busy)

In the syslog i find this warning message:

Jul 28 23:37:59 localhost modprobe: WARNING: Error inserting snd_timer
(/lib/modules/2.6.16-2-k7/kernel/sound/core/snd-timer.ko): Unknown symbol in module, or unknown
parameter (see dmesg)

(i dont find about nothing in dmesg with the words snd, timer, modprobe or snd-timer.ko)

And when the system is shutting down shows some warning message talking about a mismacht betwen kernel compilation and OSS compilation. (but i cant find the message in folder /var/log

Thanks
