Hello All,

I am trying to get sound working with quake 3 / doom 3 / RTCW from idsoftware. I don't have a sound card in this box. I just use whatever it is on the MB and it has always worked well enough to make me happy.

It looks like I am going to have to get a sound card to get sound working with these games. Anyone have these games working, can you tell me what kind of sound card you use and if you are happy with it?
