Make sure you have alsa-base,alsa-oss,and alsa-utils installed,run alsa-conf too.

Yep, those are all installed. Sound does work here but not with Q3 and Doom 3. I'll check RTCW later today.

I'm not certain but I think those games may need a sound card??

I think I used this command to get sound to work in similar games:

```
echo "et.x86 0 0 direct" > /proc/asound/card0/pcm0p/oss
```
