Not a debian question, but someone here usually has done it before.

Has anyone come across or created a system for managing real estate agency, from first viewing to sale, with an emphasis on the incorporation of the property description, survey photos and drawings, and perhaps a method to interface with web-pages? The other side is the viewings, calendar, legal and sales stuff, which I am less concerned about at the moment, but of course they should be planned for.

TIA for any ideas.

Hmm...try freshmeat:
