you can direct the output to a file,for example  
lsmod > tmp.txt

On 9/29/06, Andrew Sackville-West <[andrew@xxxxxxxxxxxxxxxxxxxxxxxx](mailto:andrew@xxxxxxxxxxxxxxxxxxxxxxxx)> wrote:

anybody know how to capture the contents of a terminal scrollbar buffer? i've got about 1000 lines of debug stuff from a network problem that I want to save, but its just sitting in the scroll back buffer of an aterm. argh! how do I get it out of there without copy/pasting it one screen at a time?

thanks

A
