you can direct the output to a file,for example  
lsmod > tmp.txt

And you can use 'tee' to direct output to a file and to standard output  
at the same time.

anybody know how to capture the contents of a terminal scrollbar  
buffer? i've got about 1000 lines of debug stuff from a network  
problem that I want to save, but its just sitting in the scroll back  
buffer of an aterm. argh! how do I get it out of there without  
copy/pasting it one screen at a time?

thanks

A
