I am inquiring about the suitability of NVIDIA PCI Express graphics card for a Debian Sarge system.

Can anyone please tell me whether the NVIDIA Geforce 6200 series (in particular the Geforce 6200 and the Geforce 6200TC) of PCI Express graphics cards are completely okay for use in a Debian Sarge system (kernel level 2.4.27) or would an update to the kernel be required ?

Many thanks.
