

Is kernel update not up to date?

Hi!

On 2006-09-27 I did apt-get update && upgrade once again and got a new kernel image (2.6.8-3-powerpc 2.6.8-12sarge5). In the advisory DSA-1184-2 one can read "Date Reported: 25 Sep 2006".

But looking at /boot I see "2006-09-07 06:54 vmlinux-2.6.8-3-powerpc"
– so that image is nearly three weeks old.

What's up there?

RoBoMe
