Subject: Trouble with apt-get

Hi, apologies if this is a common question...

I'm trying to setup an apache tomcat server for educational use and I need to install the jdk but when I run:

```
apt-get install java-package
```

I get the following output:

```
Reading Package Lists... Done  
Building Dependency Tree... Done  
E: Couldn't find package java-package
```

I've check my sources.list file and it contains the following three lines, which I think should be sufficient:

```
#deb file:///cdrom/ sarge main  
  
deb cdrom:[Debian GNU/Linux 3.1 r4 _Sarge_ - Official i386 Binary-2  
(20061116)]/ unstable contrib main  
deb cdrom:[Debian GNU/Linux 3.1 r4 _Sarge_ - Official i386 Binary-1  
(20061116)]/ unstable contrib main  
deb http://security.debian.org/ stable/updates main contrib  
I've also run apt-get update
```

Re: Trouble with apt-get

But the same error occurs. Wondering if anyone out there can enlighten me. Appreciate any assistance.

Of course, add this line in your `~/etc/apt/sources.list`:

```
deb http://ftp.us.debian.org/debian unstable main contrib non-free
```

P.S: debian-apache is a development list, so I'm CC'ing this e-mail to debian-user (proper place).

Jose

Thanks
Darryl
