You're a Debian developer – and, don't know music players?

Fortunately, it's not a requirement for DDs to know all Debian packages. I already mentioned, that I tried six players: alsaplayer, beep, mp3blaster, quodlibet, rhythmbox, zinf.

Nevertheless, I like VLC...

Does VLC fulfill the requirements I mentioned? E.g. how about the first one?

– most important: changing the speed without changing the pitch

I tried VLC but cannot find the speed/pitch control.

Thanks to Sven Arvidsson! I found the plugins SndStretch for xmms and Scizzor for both xmms and beep. Both are not packaged. They are easily compiled and at least SndStretch works fine. There is also a crossfade plugin for xmms in Debian. The drawback here is, that I'm not compatible with the UI of XMMS. It looks like a burlesque of a car radio, not like a normal program as e.g. rhythmbox.

Cheers,
